No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 31

Number 1, January 1986

J. C. PARKER, B. RIPPE, AND A. E. TAYLOR. Fluid Filtration and Protein Clearances through Large and Small Pore Populations in Dog Lung Capillaries	1
LEE V. LEAK. Distribution of Cell Surface Charges on Mesothelium and Lymphatic Endothelium	18
TOSHIO OHHASHI AND TAKEHIKO AZUMA. Pre- and Postjunctional α -Adrenoceptors at Sympathetic Neuroeffector Junction in Bovine Mesenteric Lymphatics	31
ALICIA ORLIDGE AND PATRICIA A. D'AMORE. Cell Specific Effects of Glycosaminoglycans on the Attachment and Proliferation of Vascular Wall Components	41
KARIN PRZYKLENK, MARIA T. VIVALDI, J. MALCOLM O. ARNOLD, FREDERICK J. SCHOEN, AND ROBERT A. KLONER. Capillary Anastomoses between the Left Anterior Descending and Circumflex Circulations in the Canine Heart: Possible Importance during Coronary Artery Occlusion	54
MASAAKI SATO AND NORIO OHSHIMA. Hemodynamics at Stenoses Formed by Growing Platelet Thrombi in Mesenteric Microvasculature of Rat	66
J. M. ALLEN AND N. G. MCHALE. Neuromuscular Transmission in Bovine Mesenteric Lymphatics	77
K. LEY AND K.-E. ARFORS. Segmental Differences of Microvascular Permeability for FITC-Dextran Measured in the Hamster Cheek Pouch ...	84
HANS OLAV FADNES. Transcapillary Fluid Balance in Spontaneously Hypertensive Rats: Autoregulation of Capillary Pressure	100
BRIEF COMMUNICATIONS	
HERBERT J. GLATT AND GORDON K. KLINTWORTH. Quantitation of Neovascularization in Flat Preparations of the Cornea	104
ROBERT A. MAYROVITZ, RONALD SAMPSELL, AND HARVEY N. MAYROVITZ. <i>In Vivo</i> Size of Leukocytes in the Spontaneously Hypertensive Rat	110
ERIC P. SALATHÉ AND ERIC PAUL SALATHÉ, JR. Transcapillary Fluid Exchange during Arteriolar Vasomotion	115
LETTER TO THE EDITOR	119
ANNOUNCEMENT	120

Number 2, March 1986

HARRY L. GOLDSMITH. The Microcirculatory Society Eugene M. Landis Award Lecture. The Microrheology of Human Blood	121
LENNART LINDBOM. Distribution Patterns of Blood Flow in the Rabbit Tensor Tympani Muscle in Response to Brief Ischemia and Muscular Contraction	143

DANIEL RICHARDSON, MARCUS SCHMITZ, AND NANCY BORCHERS. Relative Effects of Static Muscle Contraction on Digital Artery and Nailfold Capillary Blood Flow Velocities	157
JUI S. LEE. Tissue Fluid Pressure, Lymph Pressure, and Fluid Transport in Rat Intestinal Villi	170
TERRENCE E. SWEENEY AND INGRID H. SARELIUS. Use of Flow Cytometry to Extend and Improve <i>in Vivo</i> Determinations of Microvessel Hematocrit and Cell Flux	184
KENNETH R. KNIGHT, PETER A. COLLOPY, AND BERNARD McC. O'BRIEN. Response of the Rabbit Cutaneous Microcirculation to Prostanoid Modifiers as Determined by Laser Doppler Flowmetry	197
B. DAWANT, M. LEVIN, AND A. S. POPEL. Effect of Dispersion of Vessel Diameters and Lengths in Stochastic Networks. I. Modeling of Microcirculatory Flow	203
M. LEVIN, B. DAWANT, AND A. S. POPEL. Effect of Dispersion of Vessel Diameters and Lengths in Stochastic Networks. II. Modeling of Microvascular Hematocrit Distribution	223
VINIDA BUNDIT AND STEVEN L. WISSIG. Surgical Exposure Induces Formation of an Arteriovenous Permeability Gradient for Macromolecules in the Microcirculation of Muscle	235
M. A. A. KRATZER AND J. KINDER. Streamline Pattern and Velocity Components of Flow in a Model of a Branching Coronary Vessel—Possible Functional Implication for the Development of Localized Platelet Deposition <i>in Vitro</i>	250

Number 3, May 1986

D. J. BROOKS, R. P. BEANEY, A. A. LAMMERTSMA, D. R. TURTON, J. MARSHALL, D. G. T. THOMAS, AND T. JONES. Studies on Regional Cerebral Haematocrit and Blood Flow in Patients with Cerebral Tumours Using Positron Emission Tomography	267
J. J. FRIEDMAN AND S. WITTE. The Radial Protein Concentration Profile in the Interstitial Space of the Rat Ileal Mesentery	277
LEONARD E. GERLOWSKI AND RAKESH K. JAIN. Microvascular Permeability of Normal and Neoplastic Tissues.....	288
ARTHUR R. DIANI, GERIANNE A. SAWADA, TILLIE PETERSON, BEATRICE M. WYSE, MARGARET C. BLANKS, THOMAS J. VIDMAR, AND GEORGE C. GERITSEN. Systematic Evaluation of Microangiopathy in Diabetic Chinese Hamsters. I. Morphometric Analysis of Minimal Glomerular Basement Membrane Thickness in 11- to 15- and 19- to 23-Month-Old Chinese Hamsters	306
ROBERT D. HOGAN AND JOSEPH L. UNTHANK. The Initial Lymphatics as Sensors of Interstitial Fluid Volume	317
MELINDA S. KWONG, EDMUND A. EGAN, AND WILLIAM FERGUSON. Rabbit Tissue Composition: Developmental Aspects of Tissue Fluid and Fractional Exclusion of Albumin	325

ALBERT S. LOSSINSKY AND HENRYK M. WISNIEWSKI. A Comparative Ultrastructural Study of Endothelial Cell Tubular Structures from Injured Mouse Blood-Brain Barrier and Normal Hepatic Sinusoids Demonstrated after Perfusion Fixation with Osmium Tetroxide	333
RUTH M. LUDATSCHER. Ultrastructure of the Immediate, Histamine-Mediated Microvascular Response in Human Skin with Urticaria Pigmentosa ..	345
ERIK T. ENGELSON, GEERT W. SCHMID-SCHÖNBEIN, AND BENJAMIN W. ZWEIFACH. The Microvasculature in Skeletal Muscle. II. Arteriolar Network Anatomy in Normotensive and Spontaneously Hypertensive Rats	356
BRIEF COMMUNICATIONS	
HARUHISA HASHIMOTO, ISAAC I. H. CHEN, AND RUSSELL L. PREWITT. Comparison between Graphic and Stereological Methods for Microvascular Density Measurement in the Rabbit Ear Chamber ..	375
DAVID N. DAMON AND BRIAN R. DULING. Venular Reactivity in the Hamster Cheek Pouch and Cremaster Muscle	379
LETTER TO THE EDITOR	384
AUTHOR INDEX FOR VOLUME 31	386

The Subject Index for Volume 31 will appear in the November 1986 issue as part of a cumulative index for the year 1986.

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummings St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors**, and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for the printer. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photo-reproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the text by superscript numbers and typed on a separate sheet; in the tables by superscript letters and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Handbook for Authors*, 1978, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

- GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29**, 161-175.
- ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. In "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, eds.), pp. 99-134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1980. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
